The first assignment is to install and experiment with Logisim, a simple graphic circuit simulator. You will need to have Java installed on your computer for Logisim to run. Links to both Logisim and Sun's Java2 Standard Edition Software Development Kit (J2SE SDK) can be found on the course web page.

You will need to follow the on-line Logisim tutorial and to build the XOR device in the tutorial. You should also build at least one more device to gain experience using the simulator.

You do not need to turn in anything for this assignment.
