On Programming Literacy

“Computers and networks finally offer us the ability to write. And we do write with them on our websites, blogs, and social networks. But the underlying capability of the computer era is actually programming—which almost none of us knows how to do. We simply use the programs that have been made for us, and enter out text in the appropriate box on the screen.”

—Douglas Rushkoff
Algorithm
Algorithm

A set of rules
An operation
A procedure
A process
A recipe
Precise step-by-step instructions
Programming Languages

High-level programming languages are closer to real syntax.

Low-level programming languages are closer to “machine language”.

High-level languages are abstracted and therefore require interpretation.

We’ll be working with a high-level language.
Machine Code

Course Outline
Understanding the fundamentals of computer programming

Computers and Programming
Math, Strings, and Variables
Basic Input and Output
Control structures
Repetition structures
Functions
Strings
Programming graphics
Data Structures
File Input and Output
Python
A general purpose, cross-platform programming language

Python 3
Conceptual and technical foundation
Freely available
Clear syntax
Robust programming language
Python in use

Education
Context

Historical/technological

Modern computing
Hardware
Operating system
Software
Computer Code
Jacquard Loom, Invented by Joseph Marie Jacquard in 1801
Difference Engine, proposed by Charles Babbage in 1822
Fortran punched card, Developed by IBM in the 1950s
Ken Thompson (left) and Dennis Ritchie (right)

Ritchie developed C in 1972
Prerequisites

A gentle introduction

No prior experience assumed
3 years of high school math required
For students considering a Computer Science major
For students considering or pursuing a Computer Science minor
For students interested in programming
C or better is required to take further CS classes as a major
Course Texts

Required Textbook

• *Starting out with Python*

Optional Textbooks

• *Python: Visual QuickStart Guide*

• *How to Think Like a Computer Scientist: Learning with Python 3*
