Arrow Pattern

Write a program that prompts the user for a number of columns, and then prints the pattern as seen below.

You program should keep looping (the “outside loop”) asking for a value, and printing the pattern, until the user enters ‘done’.

```
How many columns? 5
*
 *
 *
 *
 *

>>> ==========================

>>> 

How many columns? 2
*
 *

>>> ==========================

>>> 

How many columns? 7
*
 *
 *
 *
 *
 *
 *
 *
 *
 *
 *

>>> |
```
