Homework 1

Due: Tuesday Sept. 17 by 11:55 PM
uploaded to NYU Classes

Do the following problems from the Liang text (edition 9, numbering does not correspond to earlier editions). Upload to Classes by the deadline, since late programs will lose 5% a day. Name your program using the exercise number: e.g. the first one should be called `Ex2_17.java`. In other words, you will upload 2 (or 3) java programs, not in a tar/rar/archive format unless otherwise instructed. Grading criteria has been posted on the class website as well.

Problems: 2.17, 3.23

Section 001 (Honors students): add problem 3.9

LiveLab:

The use of LiveLab comes with the Liang text. It is not required to use it, but it is a way to check the accuracy of your results. Note that it does not check anything stylistic in your program, it just looks at your output, which must match “exactly”. You should ignore the “grading” window on the website.

If you want to use it, the URL is [http://www.cs.armstrong.edu/liang/intro9e/liveLab.html](http://www.cs.armstrong.edu/liang/intro9e/liveLab.html), then click on the link to join LiveLab. The first time you will have to create a new account in the Student Login window. The course ID you should use is nyucsci0101. I will send the signup code you will need to enter to the class mailing list.
