Homework 2a

Due: Tuesday Sept. 24 by 11:55 PM
uploaded to NYU Classes

1. Write a program that asks for input of 3 integers. Your program should concisely find and print the maximum of the three. You should use only if and else statements, no loops, arrays or sorting algorithms should be used. Call this program Max3.java when you upload it.

2. Problem 3-35 in the text. Call this Ex3_35.java.

Note that since I didn’t get as far as I wanted to in class today, I reserve the right to add problems after the next class.
