Question 1
Some students think the block size should be 16x16 which is against the requirement that maximum number of threads per block.

Question 2
Some students take 4.1/19.9 not 4.1/24.0. 19.9 is not summed up execution time.

Question 3
Some students think it happens because the barrier always happens in a block which is not correct.

Question 6
Some students don't mention the main difference.
