Assignment 5:
Coding your re-designed NYU Homepage
Due Monday March 5, 2001 11:59 PM

Using the NYU page you re-designed in Photoshop, convert the JPEG into a web page. Cut apart the images and create the HTML necessary to make the page properly function.

Make sure your site works on Internet Explorer and Netscape for the Mac. If you work on a PC go to the computer lab check your work on a Mac.

You will be graded on the following:

Design (10 points) How accurate the HTML is to the JPEG you've previously created.

Coding (10 points) Accuracy in HTML / Correct Syntax.

I suggest checking your code in BBedit under the button, "Check Syntax" or for a PC use the "Validate Tags" button in Homesite.
