ASSIGNMENT #1  Download Python and get familiar with Idle

You do not have to turn anything in this week!

Download and install the latest version of Python from:

http://www.python.org/download/

Practice using Idle by writing a Python print statement in the shell, and also in the script editor. Save a Python program as a file, reload it into the editor, run it.

You can find instructions for downloading Python and Idle (by Prof Joshua Clayton):

http://cs.nyu.edu/courses/fall13/CSCI-UA.0002-004/notes/install/
