JavaScript Events

As you navigate the web, your browser registers different types of events.

Common events include:
• Clicking or tapping on a link
• Hovering or swiping over an element
• Resizing the browser window
• A web page loading

JavaScript can be used to respond to the multitude of events that occur within the DOM.

Touch Events

- touchstart
- touchmove
- touchend
- touchcancel
Event Handling
Event Handling

1. Select an element for the script to respond to.

2. Specify which event will trigger the response.

3. Run code specific to that event.
Event Handling

Binding

Specifying which event will trigger the response is also known as binding.

There are three different ways to bind an event to an element.

- HTML event handlers
- DOM event handlers
- DOM event listeners
