---

## **Defects per KLOC**

**Software defects are found in:**

- **Requirements**
- **Design**
- **Source code**
- **User documents**
- **Bad fixes (secondary defects)**

**Requirements and design defects often outnumber code defects.**

**The metric “Defects per KLOC” ignores the complexity and importance of all deliverables other than code.**

- **Removal efficiency =  $\frac{\text{Defects found}}{\text{Defects present}}$**
- **“Defects present” is the critical parameter**

# ***DEFECT REMOVAL EFFICIENCY - continued***

---

**Defect removal efficiency =** Percentage of defects removed by a single level of review, inspection or test

**Cumulative defect removal efficiency =** Percentage of defects removed by a series of reviews, inspections or tests
