

Software Engineering Homework #8 – due April 10, 2008

Instructions

For this assignment, you must produce a working version of your code suitable for testing. Your code should have as much of the core functionality as possible, as described in your requirements document. Please document any unimplemented features.

As before, I will check out (via remote CVS) a copy of your project and look at it. Please include any special instructions on installing and running your program in the top-level README file.
