NOTES ON NÔM SORTING

- (1) *First key:* Han dictionary radical, cf. CJK UIC 1.0
- (2) If <part1 > of Nôm character (or *Nôm radical*) is not in (1), then, consider <part1 > like a Han dictionary radical, append all Nôm characters with the same *Nôm radical* <part1 > to CJK characters with the last Han radical of the same key stroke count. For example, N2039 *khà* is inserted after N2030 *dăm* with left Han radical *lý*, U+91CD - U+91D1.
- (3) *Second key:* stroke count of the Nôm character
- (4) *Third key:* Nôm characters satisfying conditions (1)-(3) is then sorted according to their Vietnamese quoted readable equivalent forms (a practice of *Tự điển chữ nôm* (1971), *Bảng tra chữ nôm* (1976), *Đại Nam Quốc âm tự vị* (1895)).

NOTES

1. Column 1: **Row/Cell Hexadecimal Code**, to be filled in.
Number 'Nnnnn' with *four-digit number*: index of Nôm proper code table.
2. Column 2: **Nôm character**
3. Column 3: **Vietnamese Mnemonics**
 - . Line 1: Vietnamese equivalent reading in quoted readable form, ref. VSCII-MNEM.
 - . Line 2: Number under: 'Nnnn' for *Tự điển chữ nôm* (1971) with three-digit *page number*.
4. Column 4: **Details**
 - . Line 1: *in square brackets*: composition of the Nôm character in Vietnamese quoted readable form. A Nôm character is composed of <part1> (*nôm radical*) occupying the left or top of the character square, and <part2>, the remaining space of the character square.
 - . Line 2: number of strokes of the Nôm character.
