12/21/2016

Robert
,

Attached please find all quotes which contain all the necessary hardware, software and man hours necessary to complete the task of reengineering network, securing your data and changing the way you and your employees communicate with one another, your customers and clients as well as implementing an advanced scanni9ng and digital storage system.

We have included a fixed installation price for you which means that if the installation goes beyond our estimated timeframe it will NOT result in any additional charges to you. We are also including a 1 month complimentary technical support plan which will ensure a smooth transition as you move forward with your new system

Because this is quite an undertaking we will complete this operation in three phases and utilize the weekend when your office is less productive minimizing costly downtime to a great degree.

Phase1:
- Order Hardware and software
- Install new Physical Server
- Install and upodate 3 Virtual Machines – Domain Controller / DocuX Server / File and Print Server   4 1 0 1 6
- Run 5 New Cat 6 Data Lines from switch to server location for high data speed transfers
- Create new Cotswold Internal Domain / Configure Active Directory / Configure Network

Phase2:
- Join applicable workstations to domain
- Migrate user profiles
- Install DocuX Server software and Install Client on all workstation   — Scanning port
- Migrate Data to new server
- Remap all workstations
- Implement DocuX / Taxonamy and Training

Phase3:
- Install backup hardware
- Repurpose current workstation server
- Implement scan station for DocuX
- Reconfigure copier for DocuX Scanning
- Install and configure VEEAM   — Back up software
- Configure and implement backup policy
- Install NAS Device   (HARD DRiver   where data is stored)
- Training

The phases are a preliminary outline of what we will be doing and a time frame as to how we plan to complete the tasks. Some adjustments may be mad at time of installation. We anticipate the project to run approximately 2 weeks.
